

3Demin[®]

Demineralized Cortical Fibers

100% DBM with cohesive handling

3Denim[®]

Demineralized Cortical Fibers

3Denim Benefits

The 3Demin line of products consist of demineralized 100% cortical bone in the form of loose fibers and shaped grafts. 3Demin technology utilizes demineralized cortical bone fibers that are entangled and shaped into sizes engineered to compliment specific surgical applications. This unique process creates an interconnected porous graft material that contains BMPs and native growth factors necessary for the promotion of new bone formation.

3Denim Features

- **Osteoconductive** – entangled fiber architecture provides an excellent porous scaffold for bony ingrowth
- **Osteoinductive potential** – proprietary demineralization process optimizes the preservation of inherent growth factors that aid in cell differentiation
- **Formable handling** – entangled fibers provide grafts with superior cohesiveness and a pliable consistency upon hydration
- **Sterility assurance level (SAL) 10⁻⁶** – terminal sterilization ensures the highest level of patient safety
- **Fluid retention** – matrix absorbs bioactive fluids, like bone marrow aspirate, and supports cellular infiltration
- **Large graft sizes** - continuous material solution for longer spine constructs and spinal deformity cases

3Denim Cortical Fibers

Item

109762
109765
109760

Product Name

3Demin Cortical Fibers 2.5 cc
3Demin Cortical Fibers 5.0 cc
3Demin Cortical Fibers 10.0 cc

3Denim Boats

Item

109785
109786
109781

Product Name

3Demin Boat 50 × 25 mm – 2 pack
3Denim Boat 50 x 25mm Single
3Demin Boat 100 × 25 mm – 2 pack

3Denim Strips

Item

109775
109771
109772

Product Name

3Demin Strip 50 × 10 mm – 2 pack
3Demin Strip 100 × 10 mm – 2 pack
3Demin Strip 200 × 10 mm – 2 pack
